Set : SET1

Itemcode: II1020

Topic Name: Quantitative Aptitude

Q1: Mr. Shyam invested a sum of Rs. 2000 through Kitocoin trading app available on his mobile. The invested amount appreciated after 3 years by 10% at the compound rate of appreciation. This appreciated amount is equal to the amount that is the result of 3 years depreciation by a certain compound rate of depreciation from Rs. 3917. Find the difference between the compound rate of appreciation and depreciation:

- A 3.5%
- B 3.0%
- C 2.0%
- D 1.5%

Itemcode: II1022

Topic Name: Quantitative Aptitude

Q2: Shanu and Ishu play a tossing game. They alternatively toss a coin. Whoever receives 'Head' first, wins the game. What is Ishu's chance of winning the game if Shanu gets a chance to toss coin first?

- A $\frac{1}{3}$
- B $\frac{2}{3}$
- C $\frac{1}{2}$
- D $\frac{1}{4}$

Itemcode: II1023

Topic Name: Quantitative Aptitude

Q3: How many 4 letter words can be formed from the word "CORONAVIRUS".

- A 3148
- B 3058
- C 3072
- D 3086

Itemcode: II1025

Topic Name: Quantitative Aptitude

Q4: Care hospital has vaccination facility at different floors of the hospital i.e. Covishield at first floor, Covaxin at 2nd floor and Sputnik at 3rd floor. Daily quota of allotted vaccine is determined by the government. On a particular day, 35% of the patients got Covaxin, 45% of the patients got Covishield and 20% got Sputnik. After vaccination, the vaccinated people were instructed to take Paracetamol if they experienced fever. Among the vaccinated people, those who received Covaxin have 15% chance of getting fever, Covishield vaccinated people have 10% chance of getting fever, and Sputnik vaccinated people have 5% chance of getting fever. A vaccinated person was randomly picked up and it was found that he had a running temperature at 102F. What is the chance that he had been administered Covishield vaccine?

- A 49%
- B 42%
- C 58%

D 45%

Itemcode: **II1026**Topic Name: **Quantitative Aptitude**

Q5: In a figure, $\triangle ABC$ is a right angled triangle at C, semicircles are drawn on AC, BC and AB's diameter. Find the area of the shaded region.

Note: Figure not as per scale

- A 336
- B 676
- C 196
- D 556

Itemcode: **II1027**Topic Name: **Quantitative Aptitude**

Q6: Find the value of $\sqrt{552 + \sqrt{552 + \sqrt{552 + \dots}}}$

- A 26
- B -24
- C 24
- D -26

Itemcode: **II1029**Topic Name: **Quantitative Aptitude**

Q7: A triangular park named ABC, is required to be protected by green fencing. The length of the side BC is 293. If the length of side AB is a perfect square, the length of the side AC is a power of two (2), and the length of side AC is twice the length of side AB. Determine how much fencing is required to cover the triangular park.

- A 1079
- B 1024
- C 1096
- D 1061

Itemcode: **II1031**Topic Name: **Quantitative Aptitude****Q8:**

If $\log_3 \frac{16^{x-3} + 14}{4^{x-3} + 2} = 243$, then what will be the value of x:

- A $x \in Q$ rational numbers
- B $x \in N$ Natural numbers
- C $x \in N$ even Natural numbers
- D $x \in Q$ rational numbers, $x < 0$

Itemcode: **II1034**

Topic Name: **Quantitative Aptitude**

Q9: The goods train between Bhilai to Lucknow without rakes can go upto the speed of 72km/hour, and the speed gets diminished by the quantity that varies as the square root of the number of wagons attached. If it is known that with 4 wagons the speed is 56 km/hour, the greatest number of wagons with which the engine can just move is:

- A 84
- B 144
- C 56
- D 80

Itemcode: **II1035**

Topic Name: **Quantitative Aptitude**

Q10: Find the sum of following series:

$$\frac{3}{7} + \frac{4}{7^2} + \frac{5}{7^3} + \frac{3}{7^4} + \frac{4}{7^5} + \frac{5}{7^6} + \dots$$

- A 180/342
- B 182/342
- C 180/343
- D 182/343

Itemcode: **II1036**

Topic Name: **Quantitative Aptitude**

Q11: A mining work can be undertaken only between 9 AM to 6 PM. If A and B work entirely during these hours, they can complete the work alone in 18 days and 22 days respectively. If A and B both start together on 25th Nov at 12 noon, when should B stop doing the work so that the work will be completed exactly on 09th Dec at 12 noon?

- A 30th Nov 12 Noon
- B 01st Dec 12 Noon
- C 30th Nov 11 AM
- D 01st Dec 1 PM

Itemcode: **II1037**

Topic Name: **Quantitative Aptitude**

Q12: ABCD is a rectangle in the clockwise direction. The coordinates of A are (1, 3) and the coordinates of C are

(5,1), the coordinates of vertices B and D satisfy the line $y=2x+c$, then what will be the coordinates of the mid-point of BC.

- A (5/2, 7/2)
- B (9/2, 5/2)
- C (9/5, 7/2)
- D (3, 2)

Itemcode: **II1038**

Topic Name: **Quantitative Aptitude**

Q13: One can use three different modes of transportation to reach from Dwarka to Ghaziabad. These mode of transportation have varying speeds 20 km/hour, 30 km/hour, and 50 km/hour respectively. To reach Ghaziabad from Dwarka, Samiksha took each mode of transportation $\frac{1}{5}$ th, $\frac{2}{5}$ th and $\frac{2}{5}$ th times of her total journey time, while Shrestha took each mode of transportation $\frac{1}{6}$ th, $\frac{1}{6}$ th, and $\frac{4}{6}$ th of the total distance. The percentage by which Samiksha's travel time exceeds Shrestha travel time is nearest to:

- A 1%
- B 2%
- C 5%
- D 7%

Itemcode: **II1040**

Topic Name: **Quantitative Aptitude**

Q14: The mean of the 29 observations is 337. If the first term is increased by 1, second term by 2 and so on. The new mean will be:

- A 364
- B 435
- C 352
- D 772

Itemcode: **II1042**

Topic Name: **Quantitative Aptitude**

Q15: In the figure (not drawn to scale) given below, if $AD=CD=BC$ and angle $BCE = 81^\circ$, how much is the value of angle DBC?

- A 27°
- B 33°
- C 54°
- D 66°

Itemcode: **II1045**

Topic Name: **Quantitative Aptitude**

Q16: Shankar Fertilizer Limited and Shah Fertilizer Limited purchased one packet of Phosphorus each at the same price. Later on GreenP Company purchased both the packets at equal price from Shankar Fertilizer Limited and Shah Fertilizer Limited. But the profit percentage of Shankar Fertilizer Limited was X while that of Shah Fertilizer Limited was Y , Shah Fertilizer Limited calculated his profit on the selling price. Thus $Y = 45\frac{9}{20}\%$ of X . If the GreenP Company sells one of the packets to Mehrauli Nursery at $X\%$ profit, then what is the cost price for Mehrauli Nursery, while GreenP Company purchased each of the Phosphorus packets at Rs. 330?

- A 726
- B 762
- C 526
- D 584

Itemcode: **II1046**

Topic Name: **Quantitative Aptitude**

Q17: ABC is a triangle, $\angle B=60^\circ$, $\angle C=45^\circ$, BC is produced to/ extended till D so that $\angle ADB=30^\circ$, then given $\sqrt{3} = \frac{19}{11}$ and $BC \times CD = 3^4 \times 2^3 \times \frac{11}{19}$, what will be the square of the altitude from A to BC?

- A 144
- B 324
- C 484

D 1254

Itemcode: II1048**Topic Name: Quantitative Aptitude**

Q18: A granite stone has been purchased to build the kitchen platform and dining area of Mr. Kumar's bungalow. The cost of the stone varies directly with square of its weight. The stone broke into four parts whose weights are in the ratio of 2:4:7:11. If the granite stone had broken into four equal parts of weight then it would have led to a loss of Rs. 73600. What is the actual cost of the original granite stone (unbroken)?

- A 5,18,400
- B 2,30,400
- C 9,21,600
- D 4,66,560

Itemcode: II1049**Topic Name: Quantitative Aptitude****Q19:** Find the value of following expression

$$\text{LogSin}40^\circ \text{LogSin}41^\circ \text{----} \text{LogSin}99^\circ \text{LogSin}100^\circ$$

- A $\frac{\sqrt{3}+1}{2}$
- B 0
- C 1
- D 2

Itemcode: II1052**Topic Name: Quantitative Aptitude**

Q20: Sui-Dhaga Company has to prepare two special designer dresses for Garba event. Their unique dress designs are always in demand by the young couples who participate in Garba event competitions. The profit contribution of male dress is \$75 per unit and the profit contribution of female dress is \$80 per unit. Total 7 hours are required to stitch a male-dress and 3 hours are required to stitch a female-dress. Silk required to prepare a male dress and a female dress is 4 meters and 5 meters respectively. To produce the dresses, total available labour hours are 59 and total availability of silk is 60 meters. They would like to produce male and female dresses as per the available resources in such a way so that the total profit gets maximized for the company. What will be total maximum profit earned by the Sui-Dhaga Company?

- A 775
- B 900
- C 1015
- D 1240

Q44: Complete the following Idioms by matching List I with List II

List I	List II
A. Upset the _____ cart	I. Lemon
B. All Lombard street to a China _____	II. Cherry
C. A bite at the _____	III. Orange
D. The answer's a _____	IV. Apple

Choose the correct answer from the options given below:

- A A - III, B - I, C - II, D - IV
- B A - IV, B - III, C - II, D - I
- C A - III, B - II, C - I, D - IV
- D A - III, B - II, C - IV, D - I

Passage:

Passage I

I am occasionally troubled by the disparate rumblings of dissatisfaction about the role of theory in management. As a profession, we seem to experience recurring bouts of doubt about what theory is, and is not, and whether we should have a single unifying theory or many.

While we agonize over the degree of theoretical abstraction needed to produce knowledge, arguing occasionally for a step back from highly abstract theorization to "middle-range" theories or the much less ambitious notion of "mechanisms", it is apparent that, as a community of scholars, we are deeply engaged with and passionate about the role of theory in our profession. There is, perhaps surprisingly, considerable consensus on what theory is: theory is simply a way of imposing conceptual order on the empirical complexity of the phenomenal world. As Bacharach (1989) astutely observed, theory offers "a statement of relations between concepts within a set of boundary assumptions and constraints". Ultimately, theories reflect, in highly abstract terms, the organization of a discipline's knowledge base.

However, theory does much more than simply abstract and organize knowledge. It also signals the values upon which that knowledge is built. And it is in this somewhat shadowy connection between and among theory, knowledge, and values that cracks in our consensus about theory begin to appear. Although we might agree, broadly, about the substantive elements that constitute theory, we appear to disagree as a profession about why we need theory and what role it should play in creating, maintaining, and shaping what type of knowledge we value in the field. Fundamentally, we disagree about the value of theory.

Some see theory as a means of knowledge accumulation. These are the empiricists, who clearly constitute the dominant contemporary view. Informed by positivism, empiricists view management as a science and theory as the

cumulative product of the progressive acquisition of knowledge. Empiricists value theory for its ability to capture and summarize the phenomenal world. They have a Darwinian understanding of the relationship between theories, seeing an implicit competition between theories in their ability to capture reality. Over time, as theory progresses in its ability to proximate and predict reality, a single unified theory should emerge. When a single theory fails to emerge (as is inevitable), empiricists tend to reject the value of theory entirely and focus energy exclusively on the collection of data. Declaring a moratorium on theory—Alfred North Whitehead’s “dustbowl empiricism”—is a recurring phenomenon in the history of social science. Dustbowl empiricism is characterized by what Feyerabend (1975) described as the rhetorical bullying that is implicit in appeals to rationality and evidence.

Dustbowl empiricism is, of course, doomed to fail. Knowledge accumulation simply cannot occur without a conceptual framework. When explicit frameworks are pushed into the background, theory becomes implicit. Implicit theories are inherently dangerous because they discourage researchers from asking fundamental questions about the assumptions that underpin knowledge and the methods used to acquire knowledge. The random accumulation of evidence is also doomed because of the inherent tendency of humans to theorize. Theorization is an essential element of how we make sense of the world, and randomly accumulated data are, as Coase (1988) critically observed, nothing but “a mass of descriptive material, waiting for a theory, or a fire.”

Management researchers constituting an alternative subgroup value theory as a means of knowledge abstraction. These are the rationalists, and they serve as a useful and important counterbalance to the empiricists. Instead of seeing theory as the summation of empirical observation, rationalists see theory as occurring prior to empirical observation. That is, theory offers a perceptual lens that structures sensory experience. Without theoretically derived categories, rationalists argue, humans would be unable to cognitively organize or even recognize sensory experience.

Rationalists value theory for its logic. Because they favor deduction over induction, rationalists often prefer theories that offer internal coherence or elegant explanations of the world. For these scholars new theory is more likely to come from the interpretation of past masters, through parsing canonical texts (i.e., literature reviews), than from empirical observation.

The ultimate danger of an overemphasis on rationalism is theoretical “fetishism,” where theory becomes an exercise in writing and interpretation but is detached from the empirical world. Taken to its extreme, rational theories tend to become self-absorbed—more attentive to naval-gazing efforts of deconstructing prior theory than to challenges from contradictory phenomena. Elsewhere I have written about the emergent fetishism in theory and the concomitant danger of increasing scientism in management theory. However, rationalists offer a critically important counterbalance to empiricists, and it is the effective union of induction and deduction, or empiricism and rationalism, that tends to produce new knowledge.

A growing number of management scholars see a powerful normative value in theory. The highest and best use of theory, for this constituency, is not to represent the phenomenal world as it is but, rather, to fashion theoretical lenses that allow us to see the world as it might be. In contrast to both empiricists and rationalists, who see virtue in assuming an objective distance between research and practice and who believe that their research is largely free of political and moral assumptions, normative theorists embrace the notion that no theory is value free. They adopt McKenzie’s (2006) argument that management theories are less a camera that captures reality and more an engine that produces it. Normative scholars, thus, value theory for its ability to create new reality. They construct theories that contradict the (often dismal) view of the world given to us by both empiricists and rationalists and, instead, articulate new possibilities for organizational behavior and managerial action. Rather than attending to the deconstruction of the causes of action, normative theorists tend to focus on the motives and ethics of actors and the process by which they make choices for action.

The question “why theory?” thus has several potential answers. In fact it is the tension between these different value propositions for theory that generates a series of observable and somewhat predictable dynamics in management scholarship.

Itemcode: **II1106**

Topic Name: **Reading Comprehension And Verbal Ability**

Q45: Based on the passage, which of the following provides gist of the 'theory':

- A Theory is all about setting boundary conditions & assumptions within which relations among concepts may be studied.
- B Abstraction and knowledge mainly constitute the substantive elements of theory.
- C Theory represents a broad range of value propositions and which is what derives much of rumblings and

dissatisfaction about theory in management as a profession.

- D To make sense, theory should include empirical adequacy, offer elegant explanations of the world using a deductive logic and be able to create a new reality.

Itemcode: **II1107**

Topic Name: [Reading Comprehension And Verbal Ability](#)

Q46: Based on the passage, which of the following HOLDS TRUE about 'empiricists/empiricism':

- A Empiricists aim to produce and capture literally true stories about the phenomenal world.
- B Knowledge accumulation is an empirical activity rather than a cognitive activity or a sensory experience that aims to proximate and predict reality.
- C For empiricists, knowledge accumulation happens through collection of data in the real world.
- D Just because it is never possible to come up with a single unified theory, empiricists tend to reject the value of theory and focus energy exclusively on collection of data.

Itemcode: **II1108**

Topic Name: [Reading Comprehension And Verbal Ability](#)

Q47: Which of the following is NOT TRUE about 'dustbowl empiricism' as explained in the passage:

- A Implicit theories are arrived at by the researchers through random accumulation of evidence that lacks asking fundamental questions about the assumptions that underpin knowledge and the methods used to acquire knowledge, and hence, are dangerous
- B Dustbowl empiricism is doomed to fail since knowledge accumulation is aimed at through using implicit theories in contrast to using conceptual frameworks that are pushed into the background.
- C It is an approach to social sciences that focuses on accumulating knowledge through empirical observation and collecting data without any conceptual framework
- D While knowledge accumulation through focusing exclusively on collection of data is suggested to appeal in its rationality and evidence and it appears to have a persuasive effect but such knowledge accumulation often lacks in sincerity or meaningfulness.

Q48: Which of the following is NOT associated with rationalism or theoretical "fetishism" as described in the passage:

- A Excessive belief in the power of scientific knowledge and techniques in management theory is dangerous.
- B When rationalists indulge into excessive contemplation of deconstruction of a prior theory even at the expense of a wider view that might emerge from an opposed or conflicting phenomena, it is theoretical fetishism.
- C Rationalists view theory as a source of knowledge abstraction and suggest that elegant explanations of the world require interpretation of past masters through parsing canonical texts to cognitively organize or even recognize sensory experience using a deductive logic.
- D Theory occurs prior to empirical observation since without theoretically derived categories, humans would be unable to cognitively organize or even recognize sensory experience.

Q49: Based on the passage, which of the following about normative theory/theorists is TRUE:

- A Normative value in theory is the best for articulating organizational behaviour and managerial action.
- B Theories given by empiricists and rationalists cannot be used for articulating new possibilities for organizational

- behaviour and managerial action since their research is largely free of political and moral assumptions
- C While rationalists and empiricists aim to represent the phenomenal world as it is, normative scholars fashion theoretical lenses in a way that allows to see the world as it might be.
- D Normative theorists do not assume distance between research and practice and tend to believe that their research is not free of political and moral assumptions.

Passage:

The contrasting styles of communication represented by the managers from Spain and say Japan are often referred to as low-context and high-context, respectively.

In order to understand the implications, suppose you are having a discussion with Sally, a business colleague, and you both come from a culture that prefers low-context communication. People from such cultures are conditioned from childhood to assume a low level of shared context—that is, few shared reference points and comparatively little implicit knowledge linking speaker and listener.

Under these circumstances, it's highly likely that, while speaking with Sally, you will explicitly spell out your ideas, providing all the background knowledge and details necessary to understand your message. The United States is the lowest-context culture in the world, followed by Canada and Australia, the Netherlands and Germany, and the United Kingdom.

Though cultural norms are transmitted from one generation to the next through means that are generally indirect and subliminal, you may remember receiving some deliberate lessons concerning appropriate ways to communicate. I certainly received such lessons as a child growing up in the United States. My third-grade teacher, Mary Jane, a tall, thin woman with tightly curled hair, used to coach us during our Monday morning circle meetings using the motto, "Say what you mean and mean what you say." When I was sixteen, I took an elective class at Minneapolis South High School on giving effective presentations. This is where I learned the traditional American rule for successfully transferring a powerful message to an audience: "Tell them what you are going to tell them, then tell them, then tell them what you've told them." This is the philosophy of low-context communication in a nutshell. The communication technique is designed to help people quickly identify and correct misunderstandings, thereby reducing (if not eliminating) one common cause of needless, pointless debate.

Childhood lessons like these imbued me with the assumption that being explicit is simply good communication. But, as Takaki explained, good communication in a high-context culture like Japan is very different. In Japan as in India, China, and many other countries, people learn a very different style of communication as children—one that depends on unconscious assumptions about common reference points and shared knowledge.

For example, let's say that you and a business colleague named Maryam both come from a high-context culture like Iran. Imagine that Maryam has travelled to your home for a visit and arrived via a late-evening train at 10:00 p.m. If you ask Maryam whether she would like to eat something before going to bed, when Maryam responds with a polite "No, thank you," your response will be to ask her two more times. Only if she responds "No, thank you" three times will you accept "No" as her real answer.

In a high-context culture like Iran, it's not necessary—indeed, it's often inappropriate—to spell out certain messages too explicitly. If Maryam replied to your first offer of food, "Yes, please serve me a big portion of whatever you have, because I am dying of hunger!" this response would be considered inelegant and perhaps quite rude. Fortunately, shared assumptions learned from childhood make such bluntness unnecessary. You and Maryam both know that "No, thank you" likely means, "Please ask me again because I am famished."

If you're from a low-context culture, you may perceive a high-context communicator as secretive, lacking transparency, or unable to communicate effectively. On the other hand, if you're from a high-context culture, you might perceive a low-context communicator as inappropriately stating the obvious, or even as condescending and patronizing.

When I had first arrived at my hotel in New Delhi, I was hot and, more important, hungry. Although I would have spent that week conducting classes for a group of Indian executives at the swank five-star Oberoi hotel, the Indian business school hosting me put me up in a more modest and much smaller residence several miles away. Staying in a simple hotel just steps from the bustle of workaday New Delhi, I thought, would make it that much easier for me to get

the flavour of the city.

Lunch was at the top of my agenda. The very friendly young man behind the concierge desk jumped to attention when he saw me approaching. I asked about a good place to eat. "There is a great restaurant just to the left of the hotel. I recommend it highly," he told me. "It is called Swagat. You can't miss it."

It sounded perfect. I walked out to the road and looked to the left. The street was a whirlwind of colors, smells, and activities. I saw a grocery store, a cloth vendor, a family of five all piled onto one motor scooter, and a bunch of brown-speckled chickens pecking in the dust next to the sidewalk. No restaurant.

"You didn't find it?" the kind concierge asked in a puzzled tone as I re-entered the hotel. This time the young man explained, "Just walk out of the hotel, cross the street, and the restaurant will be on your left. It's next to the market. There is a sign. You can't miss it," he said again.

Remembering my confusing encounter with the concierge in New Delhi, if I had been an Indian from Delhi with the shared cultural understanding of how to interpret implicit messages, I would have been better able to interpret the concierge's directions. Lacking those assumptions left me bewildered and unable to find my way to the restaurant.

Q52: Which of the following best explains 'you might perceive a low-context communicator as inappropriately "stating the obvious" '(8th para) from the passage:

- A You didn't have to say it! We all understood!
- B You should not be talking to us like that!
- C You talk to us like we're children!
- D You kindly speak to us as clearly as you can!

Passage:

Read the following passage:

Of course the cosmic mystery doesn't help us at all in maintaining the social order. People often argue that we must believe in a god that gave some very concrete laws to humans, or else morality will disappear and society will collapse into primeval chaos.

It is certainly true that belief in gods was vital for various social orders, and that it sometimes had positive consequences. Indeed, the very same religions that inspire hate and bigotry in some people inspire love and compassion in others.

Yet though gods can inspire us to act compassionately, religious faith is not a necessary condition for moral behaviour. The idea that we need a supernatural being to make us act morally assumes that there is something unnatural about morality. But why? Morality of some kind is natural. All social mammals from chimpanzees to rats have ethical codes that limit things such as theft and murder.

Among humans, morality is present in all societies, even though not all of them believe in the same god, or in any god. Christians act with charity even without believing in the Hindu pantheon, Muslims value honesty despite rejecting the divinity of Christ, and secular countries such as Denmark and the Czech Republic aren't more violent than some devout countries.

Morality doesn't mean 'following divine commands'. It means 'reducing suffering'. You just need to develop a deep appreciation of suffering. If you really understand how an action causes unnecessary suffering to yourself or to others, you will naturally abstain from it. People nevertheless murder, rape and steal because they have only a superficial appreciation of the misery this causes. They are fixated on satisfying their immediate lust or greed, without concern for the impact on others – or even for the long-term impact on themselves. Even inquisitors who deliberately inflict as much pain as possible on their victim, usually use various desensitising and dehumanising techniques in order to distance themselves from what they are doing.

Many thinkers have constructed elaborate social theories, explaining why in the long run such behaviour is counterproductive. You would not like to live in a society where strangers are routinely robbed and murdered. Not only would you be in constant danger, but you would lack the benefit of things like commerce, which depends on trust between strangers. Merchants don't usually visit dens of thieves. That's how secular theoreticians from ancient China to modern Europe have justified the golden rule of 'don't do to others what you would not like them to do to you'.

Yet we do not really need such complex long-term theories to find a natural basis for universal compassion. Forget about commerce for a moment. On a much more immediate level, hurting others always hurts me too. Every violent act in the world begins with a violent desire in somebody's mind, which disturbs that person's own peace and happiness before it disturbs the peace and happiness of anyone else. Thus people seldom steal unless they first develop a lot of greed and envy in their minds. People don't usually murder unless they first generate anger and hatred. Emotions such as greed, envy, anger and hatred are very unpleasant. You cannot experience joy and harmony when you are boiling with anger or envy. Hence long before you murder anyone, your anger has already killed your own peace of mind.

For some people, a strong belief in a compassionate god that commands us to turn the other cheek may help in curbing anger. That's been an enormous contribution of religious belief to the peace and harmony of the world.

Unfortunately, for other people religious belief actually stokes and justifies their anger, especially if someone dares to insult their god or ignore his wishes. So the value of the lawgiver god ultimately depends on the behaviour of his devotees. If they act well, they can believe anything they like. Similarly, the value of religious rites and sacred places depends on the type of feelings and behaviours they inspire. If visiting a temple makes people experience peace and harmony – that's wonderful. But if a particular sacred place causes violence and conflicts, what do we need it for? It is clearly dysfunctional. Not visiting any place of worship and not believing in any god is also a viable option. As the last few centuries have proved, we don't need to invoke God's name in order to live a moral life. Secularism can provide us with all the values we need.

Q55: Which of the following is the correct central theme of the passage?

- A Believing in God prevents the society from collapsing into the primeval chaos
- B Morality is a supernatural phenomenon
- C Emotions like anger, envy or happiness determine morality
- D Morality may or may not be associated with religion

Passage:

Read the following passage:

I teach undergraduate psychology courses at the University of Maryland, and my classes draw students with diverse interests. But every one of them perks up when I pose this question: Do you want two extra-credit points on your term paper, or six points?

I tell my students that the extra-credit offer is part of an exercise illustrating the interconnectedness of choices individuals make in communities. I explain that the exercise was inspired by an ecologist named Garrett Hardin and an address that he delivered 50 years ago this summer, describing what he called “the tragedy of the commons.” Hardin said that when many individuals act in their own self-interest without regard for society, the effects can be catastrophic. Hardin used the 19th-century convention of “the commons”—a cattle-grazing pasture that villagers shared—to warn against the overexploitation of communal resources.

I’m hoping that my students will grasp the connections between the classroom exercise, Hardin’s ideas, and our planet’s most pressing problems (including climate change). I allow them to choose between two points or six points of extra credit—but there’s a catch. I stipulate that if more than 10 percent of the class members choose six points, no one gets any points. The extra-credit points are analogous to water, fuel, grazing pasture (from Hardin’s analysis), or any natural resource.

According to some free market economic theories, if everyone strives for maximum personal benefit, then societies will thrive. By this logic the student’s rational choice would be to pick six points, just as the shepherd’s rational choice would be to use as much grazing pasture as possible. And those who maximize personal consumption aren’t greedy—they’re strategic.

But when everyone chooses this path, the common resource is overtaxed, and societies end up with overharvesting, water shortages, or climate change. A possible solution seems simple: If everyone just moderated their consumption, we’d have sustainability. As many of my students say, “If everyone chooses two points, we’ll all get the points.” And yet, for the first eight years I used this exercise, only one class—of the dozens I taught—stayed under the 10 percent threshold. All the other classes failed.

This exercise was developed more than 25 years ago. Professor Steve Drigotas of Johns Hopkins University had been

using it for some time when he administered it to me and my classmates in 2005. My class failed too—and I, who had chosen two points, was incredibly frustrated with my peers who had chosen six.

In 2015 one of my students tweeted about the exercise—“WHAT KIND OF PROFESSOR DOES THIS”—and his lament went viral. People around the globe weighed in: Does so many people choosing six points mean it’s human nature to be greedy and selfish?

Actually most people aren’t. But it’s very tricky to get people to cooperate, especially in large groups of complete strangers. After all, if someone else is taking more for themselves (running more water or choosing six points), why shouldn’t I? But if we all think this way, eventually we’ll all lose.

Hardin suggested that education might make a difference—that if we teach people about the consequences of taking too much, they might not. I’ve been skeptical about this idea. When my student’s tweet went viral, some colleagues said that I wouldn’t be able to use the exercise again (because students would already know how it works). I laughed. If it were only that easy! My suspicion was justified. Even after the exercise got wide exposure, my students still failed the challenge to get the extra-credit points.

Despite this I remain optimistic. After all, most of my students, about 80 percent, choose two points—just as most people choose to cooperate in real-world situations. Most of us want to do what’s right. But that alone won’t solve our problems, so we need to think creatively and use behavioral science to find solutions.

In 2016 I decided to change things up. In hopes of finding a way to increase cooperation, I drew from the scientific literature on social groups and introduced a third option: Students could choose two points, six points—or zero points. That’s right. Zero. Why would anyone do that? Well, for each student who chose zero points, one of the six-point choosers (selected randomly) would lose everything, reducing the total number of six-point choosers by one.

The zero-point option is self-sacrificial; students forgo points for themselves in order to help the group by restraining those who take too much. In behavioral experiments this type of action is called altruistic punishment, a term coined by economists Ernst Fehr and Simon Gächter. Their research documented people willingly giving up some of their own resources in order to punish those who behave selfishly in a group context—and doing so in the belief that every individual profits from increased cooperation.

Usually a few of my students each semester choose the zero-point option, and sometimes that’s all it takes. Just a handful of people can make a huge difference—that is, a few self-sacrificing students can bring down the total number of six-point choosers to below the 10 percent threshold. This additional element has dramatically increased cooperation in my courses. Now roughly half my classes receive the extra-credit points. In my opinion this is a remarkable turnaround. And some of my classes have done this without anyone actually choosing the zero-point option; simply knowing it was available was enough to increase cooperation.

Though this type of solution may work on the small scale of a classroom, won’t we need much larger action to curb global problems like climate change? Yes, but the principle is the same—it’s about collective action and reducing overconsumption. For example, recently I started volunteering with Citizens’ Climate Lobby (CCL), an organization that advocates for a policy known as carbon fee and dividend. This plan would put a steadily rising fee on fossil fuels and distribute the money raised back to American households (to protect families against rising costs). Ultimately this would reduce fossil fuel consumption by making this type of energy more expensive to use—so reducing consumption would be better for both our wallets and the environment. At CCL, volunteers meet with lawmakers and conduct outreach to the community. Through our efforts—again, collective action—we gain allies in Congress and the public. By early this year the House’s bipartisan Climate Solutions Caucus had 70 members (half Democrats and half Republicans) from states across the country.

The challenge that Garrett Hardin described 50 years ago remains today: Our survival depends on each of us and all of us conserving the commons. I choose to remind myself of that with these wise and hopeful lines from the Beatles: “All the world is birthday cake / so take a piece / but not too much.”

Passage:

Directions: The following graph provides data about the refrigerators and television sets manufactured by XYZ company in 8 days - day1 to day8. However, on each day after quality check (QC) some products were found to be defective. The attached bar chart provides data about aggregate number of refrigerators and televisions manufactured by the company and the number of refrigerators found defective after QC on each day of the given eight days. All the televisions and refrigerators which cleared the QC were packed for selling.

The bar chart given below provides information about the fraction of the number of televisions found defective to number of televisions which cleared the QC.

Itemcode: II1014

Topic Name: Data Interpretation And Logical Reasoning

Q75: If the number of televisions which cleared the quality check (QC) on each of the given eight days is same, then at least how many refrigerators cleared the QC on day 3?

- A 20
- B 30
- C 25
- D 40

Itemcode: II1015

Topic Name: Data Interpretation And Logical Reasoning

Q76: On how many of the given 8 days the number of refrigerators which cleared the quality check can be zero?

- A 1

B 2

C 3

D 5

Itemcode: II1016**Topic Name:** Data Interpretation And Logical Reasoning**Q77:** Which of the following can be the ratio of number of televisions and refrigerators which cleared the quality check on day1?

A 1:4

B 1:5

C 1:6

D 1:7

Itemcode: II1019**Topic Name:** Data Interpretation And Logical Reasoning**Q78:** Given that the number of televisions which cleared the quality check on each of the eight days is equal to 'X', then how many distinct values of X are possible?

A 2

B 3

C 4

D 5

Passage:**Read the following passage:**

Ten teams have submitted their nominations for a reputed Hackathon. They were first divided in two groups of 5 teams each: Ghost Riders to The Capitalists (group 1); and Team Intelligence to Dr Bigbull (group 2). In the competition, each team from one group had to pitch their idea against the each team from another group. For example Ghost Riders will have to pitch their idea against each team in group 2. The following table gives partial information about the final scoresheet at the end of the competition:

Group 1 Vs. Group 2		Group 2					Points
		Vs. Team Intelligence	Vs. Evil Masterminds	Vs. Golden Hawks	Vs. Screaming Eagles	Vs. Dr BigBull	
Group 1	Ghost Riders				Tie		7
	Tech Pirates		Lost*		Lost		9
	Super Sellers						15
	The Think Tank					Won	17
	The Capitalists			Won		Won	14
Points		12	10	14	9	12	

Note: * To be read as “Tech Pirates” lost the idea presentation round against “Evil Masterminds”.

For group 1 - The total points earned by each teams have been given in the last column e.g. Ghost Rider has scored 7 points overall.

For group 2 - The total points earned by each teams have been given in the last row e.g. Team Intelligence has scored

12 points overall.

In addition to this, the golden Hawks did not lose the presentation round against The Think Tank.

Point rule:

- (i) If a team Wins, the winning team will get 5 points;
- (ii) If there is a tie, both teams will get 2 points each; and
- (iii) If a team lost the match, the losing team will get 0 points.

Itemcode: **II1059**

Topic Name: [Data Interpretation And Logical Reasoning](#)

Q79: What was the result of presentation round between The Think Tank and Evil Masterminds?

- A The Think Tank Lost
- B Evil Masterminds Lost
- C A tie
- D Insufficient information provided

Q80: Tech Pirates had a tie against which of the following team(s)?

- I. Team Intelligence
- II. Screaming Eagles
- III. Dr Bigbull
- IV. Golden Hawks

Choose the correct option?

- A Only I
- B Both II and III
- C Only III
- D Both III and IV

Itemcode: **II1065**

Topic Name: [Data Interpretation And Logical Reasoning](#)

Q81: Following are four statements:

- I. Golden Hawks won the presentation round against Super Sellers.
- II. Evil Masterminds won the presentation round against Ghost Riders.
- III. Screaming Eagles won the presentation round against The Think Tank.
- IV. The presentation round between The Capitalist and Team Intelligence resulted in a tie.

Choose the correct option:

- A Statement I is true, and Statement II is false.
- B Both statement II and Statement IV are true.

- C Only statement I is true.
D Only statement III is false.

Passage:

Read the following passage:

In 2021, IIFT has announced the “Student of the year” competition which has two steps: – the preliminary stage and the final stage. The preliminary stage comprised of overall academic excellence in the five trimesters of the coursework. When the results of the preliminary stage were announced, it was found that only five students - Aavanya, Aarav, Saanvi, Vagisha, and Raghav qualified to compete in the final stage of “Student of the year 2021” competition. In the final stage there were five rounds of extra-curricular activities wherein the students could score from 1 to 10 points in each round. These five extra-curricular activity rounds were Debate, Extempore, Business quiz, B-plan competition, and Case Study analysis. The student with maximum points across these five rounds would be considered as winner and would take the prestigious trophy of “Student of the year 2021”.

So at the end of these five rounds of competitions, when the Jury asked for the scorecard to find out the final winner, the scorer informed them that due to some technical glitches several entries have been deleted and jury was presented with following table:

	Debate round	Extempore round	Business quiz round	B-plan competition round	Case study analysis round	Total
Aavanya	10		7		9	35
Aarav	7					
Saanvi			5		6	
Vagisha				8		33
Raghav		3	10			29

However, the scorer has made the following observations too:

- (i) No two students have scored equal points in the same round.
- (ii) Vagisha has scored an odd number point in case study analysis round.
- (iii) Aarav’s total score point was in the multiple of 8, and it was the least among all.
- (iv) There was no tie between any two students in the overall/total points.
- (v) Vagisha has scored same points in the following rounds: Debate round, and Extempore round.
- (vi) None of the missing scores were less than 4 in any round.
- (vii) Aavanya won the competition and won the prestigious trophy of “Student of the year 2021”.

Itemcode: **II1066**

Topic Name: **Data Interpretation And Logical Reasoning**

Q82: Choose the correct pair of possibilities:

Possibility I: Raghav scored 8 points in debate round.

Possibility II: Vagisha's score in extempore round is twice of Aarav in the same round.

Possibility III: Vagisha scored 6 points in the debate round.

Possibility IV: Vagisha scores more points than Aavanya in the business quiz round.

- A Possibility I and possibility II are true.
- B Possibility II and possibility III are true.
- C Possibility III and possibility IV are true.
- D Possibility I and possibility IV are true.

Itemcode: **II1070**

Topic Name: [Data Interpretation And Logical Reasoning](#)

Q83: If Aavanya scores 5 points in the B-plan competition round, and sum of two of the three missing values for Raghav is a prime number, then which possibility is correct?

Possibility I: Raghav has scored 5 points in Case-study analysis round.

Possibility II: Raghav has scored 5 points in Debate round.

Possibility III: Raghav has scored 4 points in Debate round.

- A Possibility I alone is definitely false.
- B Possibility II alone is definitely true
- C Possibility III alone is definitely true.
- D All possibilities are true.

Itemcode: **II1072**

Topic Name: [Data Interpretation And Logical Reasoning](#)

Q84: Suppose, if Saanvi scores 5 points in Debate round, still wins the "Student of the Year" trophy by scoring one more point than "Aavanya" in total score; and Raghav has been given opportunity to re-appear for any two rounds, how many combinations Raghav can choose to win prestigious "Student of the Year" trophy:

- A 3
- B 4
- C 5
- D 6

Passage:

Read the following passage:

In an intra B-school competition, five students have participated. To facilitate a fair and blind evaluation, each student has been assigned a secret project name (i.e., Red wings, Green forest, Purple umbrella, Blue ocean, and Orange candy) randomly; and were given two awards: one for being the best in the particular management discipline (i.e., Marketing, Finance, Operations, Human Resources, and Information Technology); and one for being ranked from 1st to 5th. Only one student can be declared as winner under each category. The secret project name, management discipline, and ranking information provided above need not to be in the same order. Determine who has been assigned which secret project name, and which two awards, they received. Following set of information are also available:

- (i) The winner under marketing category was ranked just above Babita's project (which was not Purple umbrella).
- (ii) The project coded as Blue Ocean was ranked just above Babita's project (which was not winner under information technology discipline).

- (iii) The Green forest project ranked just above the winner of project under human resource discipline, and just below Chandan's project.
- (iv) The Red wings project was placed just higher than the winner of Information Technology discipline, and just below the Amar's project.
- (v) The Orange candy project ranked just above Dolly's (which wasn't the Purple umbrella) and just below the winner of project under Finance discipline.
- (vi) The winner under information technology was neither coded as Green forest, nor was it won by Eshan.

Q88: Which of the following are correctly matched?

	Secret Project Name	Discipline
I.	Orange candy	Marketing
II.	Blue ocean	Finance
III.	Red wings	Information Technology
IV.	Green forest	Operations
V.	Purple umbrella	Human Resource

- A Only II and III
- B Only II and V
- C Only IV and V
- D Only I and II

Passage:

Read the following passage:

William and his wife Olivia have a family of three generations comprising of thirteen members. Some of Olivia's children are married, but none of her grandchildren is married.

- I. Olivia has a daughter-in-law named Victoria and two son-in-laws, one being Jack.
- II. James brother is Michael.
- III. Michael has two nephews and two nieces, one being Luna.
- IV. Victoria, who is sister-in-law to Michael, has four nephew and nieces. Victoria has no children.
- V. Parker, who is married to Charlotte in the family has a daughter Violet and a son.
- VI. John has a sister and two cousins, Dylan and Violet.

Answer the following based on above informations:
